

TacticID

B&W TEK

Handheld Tools for Narcotic and Pharmaceutical Drug Identification

The TacticID from B&W Tek is a field-ready handheld Raman spectrometer designed for indirect contact analysis of narcotics, controlled substances, pharmaceutical drugs, cutting agents and more.

- Identify MDMA, MDA, Synthetics, Cannabinoids, Heroin and many other popular narcotics.
- Simple, easy-to-read, color-coded results: Red, Yellow, Green
- Non-destructive testing of solids, liquids, gels, and powders
- Critical component mixture analysis can identify mixed samples

Lab Proven Results
Without the Lab

TacticID

Applications

- On-site identification of pharmaceutical drugs, narcotics and controlled substances
- Drug diversion analysis
- Counterfeit and falsified drug detection

Features

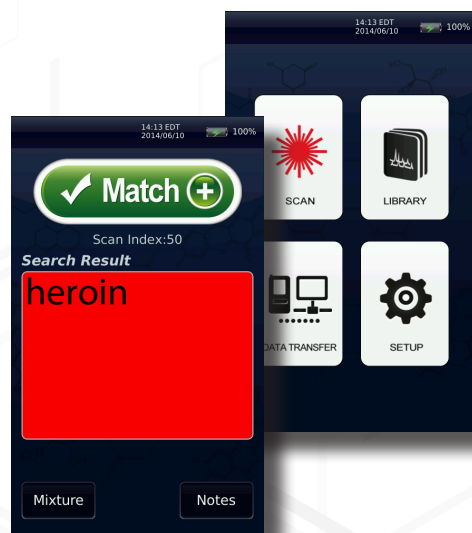

Ease of Use: Designed for technical and non-technical users alike, featuring simple, easy to understand menus and commands.

Unique Accessories: Liquid vial holder and right angle adaptor for non-disruptive, hands-free scanning.

Unmatched Libraries: Includes over 1,000 on-board library items including narcotics, controlled substances, pharmaceutical drugs and cutting agents.

Bright Touch Screen: Ultra crisp HD display with touch screen capability for on-the-spot note and text inputs.

Designed for Safety: Scan delay up to 120 seconds and laser power adjustable from 10-100%.
